

Tic-Jack-Toe Screen Specifications

Game Overview:

Tic-Tac-Toe is an intense two player game where each player is represented by either 'X' or an 'O'. Each player takes a turn marking the location that the player would like to occupy with their represented character on a three-by-three board. The objective of Tic-Tac-Toe is to become the first player to occupy three spaces (horizontally, vertically, or diagonally). Refer to Figure 1 below for an example of such a game.

Program Overview:

Tic-Jack-Toe is an implementation of Tic-Tac-Toe in the Jack programming language. It aims to make this classic paper and pencil game a high-intensity action adventure. The game is played between two human players on a normal board. Similar to the original game, each player marks the location they wish to occupy. Unlike the original game, Tic-Jack-Toe receives user input via a row and column number. This speeds up game play to break-neck speeds. Enjoy this exciting, crazed, thrill of a game.
